

Attention Is All You Need — Companion Worksheet

Use this worksheet alongside the tutorial.

Page references (e.g., Sec. 2.1) point to the main document.

Three-Pass Reading Log (Tutorial Sec. 3.1)

Pass	Key Observations	Questions / Next Actions
Pass 1 (Big Picture)		
Pass 2 (Details)		
Pass 3 (Rebuild & Critique)		

Author's Intent & Argument Map (Tutorial Sec. 3.2)

Paragraph Moves: Label two introduction paragraphs with the move they perform (Context / Gap / Response / Contribution) and explain why the move is needed before the next one.

Paragraph (page ____)	Move	Why the author made this move

Argument Elements: Highlight claim/evidence/warrant/limitation in your paper copy. Summarise one example here.

Element	Sentence chosen & reason
Claim	
Evidence	
Warrant	
Limitation	

Diagram Recreation (Tutorial Sec. 3.3.1 / 4.1)

Task: Sketch the decoder block (masked self-attention, encoder-decoder attention, FFN). Label the tensors and residual paths.

Explain the diagram (“figure sandwich”):

Top-level context: _____

Key observation(s): _____

Takeaway or implication: _____

Parallel Writing Workspace (Sec. 5.1)

Abstract (4 moves). Draft 100 words following the tutorial template.

Introduction (Context → Gap → Proposal → Contributions).

Write one sentence per move; mark verbs/connectors you borrowed from the paper.

Paraphrasing Practice (Sec. 5.2)

Original (abstract):

“Our model is also significantly more parallelizable and requires significantly less time to train.”

Your rewrite:

Critical Thinking & Reverse Analysis (Tutorial Sec. 5.9)

- $O(n^2)$ complexity: list two scenarios where this is prohibitive and note one mitigation to explore.
- Data parallelism assumption: what needs to be true for the Transformer training setup to scale in your domain?

Reverse Analysis (100 words): Challenge the assumption that recurrence can be discarded entirely. Cite at least one figure/table or quote from the tutorial/paper.

Peer Review Rubric (Sec. 6.2)

Score your partner's draft (1–5) and jot actionable notes.

Criterion	Score	Reviewer notes / quotes to reference
Content accuracy		
Structural coherence		
Rhetorical effectiveness		
Citation discipline		
Language clarity		

Revision log: What did you change after feedback?

Self-Editing Checklist (Sec. 6.3)

Sentence variety: mix simple/complex sentences; avoid repeating the same opener.

Voice balance: explain design choices in active voice; use passive only when the actor is irrelevant.

Transition cues: underline connectors (*however, therefore, in contrast*) and confirm each links ideas clearly.

Terminology alignment: match notation with the tutorial/paper (e.g., d_{model} , h).

Citation syntax: ensure every claim referencing the paper points to a figure/table/section.

Final read-aloud: circle any sentence that sounds awkward when read aloud and revise.

Transferable Rhetorical Patterns (Sec. 6.4)

Original phrasing	Your reusable template	Future use case

Reminder: keep this worksheet with your draft. Review the tutorial checklists before submission.
